

CDC Responds: Influenza — Prevention, Detection, and Control

Thursday, December 20, 2001 ~ 1:00 PM - 2:30 PM ET

This live satellite and web broadcast will present an update on the clinical presentation, diagnosis, treatment, and prevention of influenza. Included will be an overview of the impact of influenza in the community and in healthcare settings, the use of influenza vaccination, and the use of influenza antiviral medications. An update on the availability of influenza vaccine for the 2001 season will also be provided. A question and answer session will enable participants nationwide to pose questions to panelists in advance for response during the program.

Goal

To provide an update on prevention, detection, and control strategies of influenza.

Objectives

After the program, participants will be able to:

- Describe the clinical signs and symptoms associated with influenza.
- Define the impact of influenza in the community and in healthcare facilities.
- Understand the use of influenza diagnostic tests and antiviral medications.
- Identify at risk populations targeted for influenza vaccination and obtain information on the vaccine supply for 2001-2002.

Target Audience

Clinicians, infection control professionals, public health officials, other healthcare personnel

Faculty

Edward L. Baker, MD, MPH, Director, Public Health Practice Program Office, Centers for Disease Control and Prevention (CDC), Assistant Surgeon General, US Public Health Service

James M. Hughes, MD, Director, NCID, CDC

Carolyn Bridges, MD, Influenza Branch, National Center for Infectious Diseases (NCID), CDC
